

# Rainpro Hand Pump

The RainPro hand pump is a manually operated, rugged, self priming, debris tolerant pump that is manufactured to easily and quickly pump out water filled; valve boxes, broken pipe lines, sprinkler repair sites or anyplace you want to pump water away from. This hand pump will flow up to 13 GPM or 1/4 gallon per stroke.

To use, simply insert the 1-1/2" pump intake on bottom of shaft into the water you want vacated and place the flexible outlet hose (6' long) to the location you want the water to be pumped. The water can be muddy and laden with dirt and debris. Should pump get clogged, it can be easily disassembled, cleaned and back to use in a couple of minutes. Repair parts are available.
